

LIQUID CRYSTAL THERMOMETERS

Liquid Crystal is widely used for temperature measurement due to its accuracy. It is presented in the form of flat, unbreakable and flexible thermometers. Each temperature event is made from a Liquid Crystal mixture and can be formulated to an accuracy of $\pm 0.5^{\circ}\text{C}$.

Liquid Crystal formulations can be made in temperatures from 0°C to 120°C and an extensive range of sizes and designs are available. For quantities in excess of 10,000 strips we can make bespoke designs although our stock range of thermometers should easily cover most applications.
